

VIDEO MANAGEMENT SYSTEM

Intelligent surveillance at scale.

AI-powered video management with object detection, activity heatmaps, alarm management, and multi-server recording. Self-hosted, with zero per-camera licensing.

SELF-HOSTED

AI Object Detection

GPU-accelerated detection of people, vehicles, and 80+ object classes. Per-zone filtering, exclusion zones, and custom model training.

Activity Heatmaps

Visualise activity patterns filtered by object class. Identify high-traffic areas and blind spots over any time range.

Alarm Manager

Detection-triggered alarms with SOPs, checklists, and escalation levels. Notify via Telegram, Discord, email, or webhook.

Video Synopsis

Condense hours of footage into minutes. Moving objects are extracted, scheduled, and composited onto a clean background.

Multi-Server Architecture

Distributed recording across servers and sites with automatic failover. No single point of failure.

Role-Based Access

Configurable roles with page and action permissions. Location-based filtering and per-user dashboard layouts.

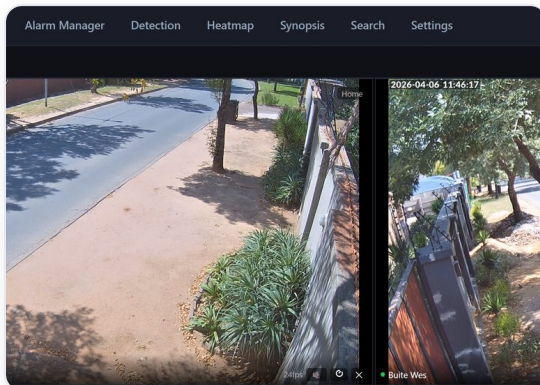

License Plate Recognition

Read plates from any camera. Watchlist matching for residents, visitors, and blacklisted vehicles. Stolen-vehicle alerts.

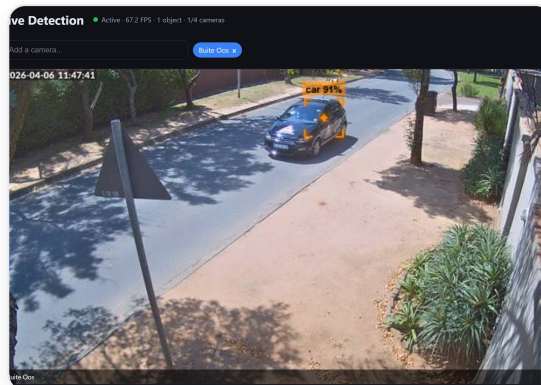

Web-First Interface

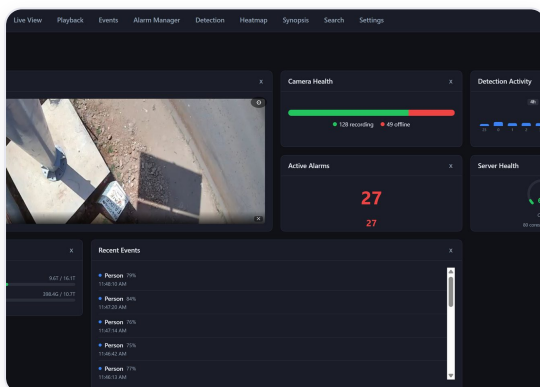

No desktop client needed. A full-featured browser UI with dark/light mode, drag-and-drop layouts, and saved views.
